Page 3, Section 4, currently reads

NEW SECTION. Section 4. Aggregate net metering facility -- reliability and safety. An aggregate net metering facility must include, at the aggregate net metering facility owner's own expense, all equipment necessary to meet applicable safety, power quality, and interconnection requirements established by the national electrical code, national electrical safety code, institute of electrical and electronics engineers, and underwriters laboratories.

Amend to read:

NEW SECTION. Section 4. Aggregate net metering facility -- reliability and safety. (1) An aggregate net metering facility must include, at the aggregate net metering facility owner's own expense, all equipment necessary to meet applicable safety, power quality, and interconnection requirements established by the national electrical code as specified in 50-60-603(2), national electrical safety code, institute of electrical and electronics engineers, and underwriters laboratories.

(2) An aggregate net metering facility shall be [Drafter language needed here - considered in violation of HB 394 and not able to be an aggregate net metering facility] until it has been permitted and inspected as required by 50-60-604. Proof of permitting and inspection shall be certified to the public utility.

(a) An aggregate net metering facility shall certify to the public utility the standard prevailing rate of wages and benefits for building construction, as provided in 18-2-413, was paid during the construction phase. If this cannot be certified to the public utility then the installation cannot be an aggregate net metering facility.
